

CIS170 Programming Project #1

CloudServices 24/7 Inventory Report

Input: Input comes from the disk file CSINVP. The external file definition has already been written as below, and data is already present in the file. The file was originally created via the DDS shown here:

```
.....A*. 1 ...+... 2 ...+... 3 ...+... 4 ...+... 5 ...+... 6 ...+... 7 ...+... 8 ...+...
***** Beginning of data *****
/* CloudServices247 Inventory Master File
A                                     UNIQUE
A      R INVREC
A      PRODNO      6S 0      COLHDG('Product Number')
A      PACT        1      COLHDG('Product Active')
A      DESCRP      40      COLHDG('Description')
A      SELLP      6S 2      COLHDG('Selling Price')
A      SHIPWT      5      COLHDG('Shipping Weight')
A      QTYOH      4P 0      COLHDG('Quantity On Hand')
A      RORPNT      4P 0      COLHDG('Reorder Point')
A      RORQTY      4P 0      COLHDG('Reorder Quantity')
A      RORCOD      1      COLHDG('Reorder Code')
A      SUPCOD      3      COLHDG('Supplier Code')
A      CURCST      6S 2      COLHDG('Current Cost')
A      AVGCST      6S 2      COLHDG('Average Cost')
A      K PRODNO
```

Output: the external printer definition, INVREPORT has already been coded in DDS, following the printchart on the next page. This code is already in your library, in your QDDSSRC.

Specs:

1. This program is a simple read/write application. It reads every record in the file and writes a detail line out to a report, nicely formatted with headings, as shown on the next page.
2. Examine the input file contents: `RUNQRY QRYFILE((CSINVP))`
3. Access your QDDSSRC source file. STRPDM
Choose "3" for Work with Members
Fill in QDDSSRC for file, your library name (same as user id) for Library
4. Browse (option 5) through the INVREPORT DDS code that has been placed into your library to get a sense of what the external printer definition that is being supplied to you contains. Then exit the source member.
5. Compile (option 14) the INVREPORT to create the printer file object.
6. Create the RPG program, naming it PROJECT1, that produces the report. (Using QRPGLSRC as your source file)
 - Be sure to start in column 1 of the very first line with `**Free`
 - Include comments at the top:
 - Program name
 - Your name
 - The date
 - The purpose of the program
 - Refer to the video in this unit as needed, and if you have errors, refer to the "Debugging Syntax Errors" video in the Reference Guide for Common Activities section.
7. Email me when your project is ready to be evaluated.

See next page for Printchart
