**Assignment Instructions**

**Project: Saving and Displaying Data with Web Storage**

**Before You Begin**

**Complete this week's reading and review the related materials before starting. This project uses two publisher-provided examples to practice saving data in the browser and displaying what has been stored.**

**1. Save the Player's Maze Position**

**Update Maze.js and the related publisher files so the maze game automatically saves the player's position when the player leaves the page.**

**Refer to pages 323–325 and review the notes in this week's reading instructions for guidance on making the example work in Chrome.**

**Upload all required files to the student server. Test the published Maze.html page to confirm that the position is saved and restored when you return.**

**2. Display Stored Items as a Numbered List**

**Modify FindAllItems.html, discussed on page 326, so clicking the Dump button displays all stored items as a bold, ordered list.**

**Use numbers rather than bullet points, and make the text of each list item bold.**

**Test Your Work**

**Open both pages from the same student server address, using the same browser and browser profile, so they can access the same local storage.**

**Check the following:**

- **Play the maze game and move the player to a new position.**
- **Leave the page, then return and confirm that the player's position is restored.**
- **Open FindAllItems.html and click Dump.**
- **Confirm that the saved x and y coordinates appear in the bold, numbered list.**

**Upload and test your changes frequently. Make sure you are testing the published pages on the server.**

**Submit Your Project**

**Submit the following through this assignment in Blackboard:**

1. **The URL to your working Maze.html page on the student server.**
2. **The URL to your modified FindAllItems.html page on the student server.**

**Please reach out if you have questions or get stuck. I am happy to help!**
