Assignment: JQuery and Form Validation

Assignment Instructions

Listen

CIS 228 Assignment: Advanced Form Validation with jQuery

Objective

This assignment requires you to demonstrate proficiency in using jQuery for client-side event handling and implementing robust form validation logic. You will take an existing registration form and implement the validation rules defined below.

Prerequisites

- Basic understanding of HTML structure.
- Familiarity with jQuery selectors and methods (.on(), .val(), .text(), .addClass()).
- Ability to use JavaScript conditional statements (if/else).

The Task

Your goal is to complete the logic within starter.js. When the user attempts to submit the form, your script must perform the following checks:

1. **Name Field:** Must not be empty.
2. **Username Field:** Must not be empty, and must be at least 5 characters long.
3. **Email Field:** Must not be empty and must conform to a basic email pattern (e.g., user@domain.com).
4. **Password Field:** Must not be empty and must be at least 8 characters long.

Validation Requirements: * **Prevent Default:** If validation fails, the form submission must be stopped (e.preventDefault()). * **User Feedback:** For *each* failed validation, an error message must appear immediately below the field, and the field itself must be visually highlighted using the .error CSS class. * **Focus:** If the validation fails, the browser focus should automatically jump to the *first* field that failed validation. * **Success:** If *all* fields pass validation, an alert box confirming success must be shown, and the form should be cleared.

Deliverables

Submit the following files: 1. index.html 2. style.css 3. starter.js (Your completed work)

Grading Rubric (Total: 100 Points)

Component	Points	Description
Structure & Linking	10	Correct linking of jQuery, CSS, and JS.

Event Handling	20	Correctly using $(document).ready() and preventing default form submission.
Name Validation	20	Correctly checking for emptiness and displaying the error.
Username Validation	20	Correctly checking for emptiness AND minimum length (5 characters).
Email Validation	20	Correctly checking for emptiness AND valid regex format.
Password Validation	10	Correctly checking for emptiness AND minimum length (8 characters).
