```
Write Heading;    // print headings
READ xxxxx;       // priming read
DOW NOT %EOF;     // check for end of file
  // place math and accumulations here
  // check for overflow in usual manner
  WRITE Detail;       // print the detail line
  READ xxxxxx;        // read next record
ENDDO;
Write Total;    // write the total line only once, after the loop finishes
*INLR = *ON;         // set LR on
RETURN;                 // program ends
```
