Project #1 Instructions
10/18/26
Chris Grimm

Assignment Instructions

Create your first simple HTML page called ***index.html*** in the root of your VS Code project and then upload (publish) it to the student server using VS Code. You can start with the HTML code shown below.

Be sure to customize your code so it removes my information and replaces it with yours. You may embellish and expand on the code any way you like, but nothing else is necessary. In the end, make sure the code is error-free by testing it on the W3C validator at: https://validator.w3.org/ and make sure it shows up as your home page when you visit your server/website. You can find your website address by visiting the course homepage at: http://138.197.85.41/~student08/

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="utf-8">
    <title>
    Christopher VanOosterhout
    </title>
  </head>
  <body>
    <h1>Christopher's Homework Home Page</h1>
    <p>
    This is where I will build out my HTML home page content this semester
    </p>
```

```
  </body>
</html>
```

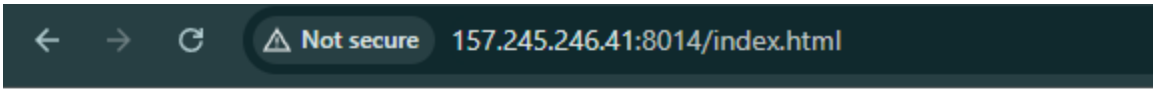

This assignment is worth 25 points. Once you have completed this portion of the assignment, send me an email with the subject line CIS258 Week 2 Project Part 1. Submit your URL here as a link so I can view and give feedback on your submission.
