

## CIS270A Project 8

### STATIC / BIND-BY-COPY BINDING

*Note: although the various compile and create commands are available in the RDi, you may evoke these commands in a more straight-forward fashion in the green screen environment.*

1. Before you begin, **you should watch the “Bind-by-Copy Video” in the unit.**
2. In Project 7, you created five standalone programs PRJ7CALLER, MAKEID, MAKEPASS, MAKEFOUR, and MAKEDATE. PRJ7CALLER dynamically called MAKEID, MAKEPASS, MAKEFOUR, and MAKEDATE and using parameter passing, data was shared between the calling program and these called programs. The programs remained separate entities.
3. Next, you will change these programs into MODULES and statically bind them together into a program PRJ8MAIN. Start by copying your source members into these names:
  - a. Copy PRJ7CALLER into PRJ8MAIN
  - b. Copy MAKEID into MODID
  - c. Copy MAKEPASS into MODPASS
  - d. Copy MAKEFOUR into MODFOUR
  - e. Copy MAKEDATE into MODDATE
4. PRJ8MAIN: this should become the main procedure module. Your MODID, MODPASS, MODFOUR and MODDATE subprocedures will be *called from PRJ8MAIN*, each one **Returning** a value into PRJ8MAIN.
5. MODID, MODPASS, MODFOUR, MODDATE: these should be changed so that each one is a “Nomain” module that will **Return** a value to PRJ8MAIN.
6. Compile each module into a MODULE object using CRTRPGMOD. (note that option 15 in PDM can also be used, however, use CRTRPGMOD to become more familiar with what is happening)
7. Use CRTBNDDIR to create a binding directory named PRJ8BINDER, specifying your library as the place to store this binding directory. Then use WRKBNDDIRE to add the five modules to the binding directory.
8. Use CRTPGM to statically bind these MODULES together into a PGM, named PRJ8MAIN, with the module PRJ8MAIN as the entry module (since that is the module that is the “main” procedure; it is common to name the PGM object by the same name as the module that is the “main procedure”)
9. Use CALL to call the PRJ8MAIN program; it should have the same outcome as your Project 7.
10. STRPDM, 2-Work with Objects: You should see the following:
  - a. MODID           \*MODULE
  - b. MODPASS       \*MODULE
  - c. MODFOUR       \*MODULE
  - d. MODDAT         \*MODULE
  - e. PRJ8MAIN       \*MODULE
  - f. PRJ8MAIN       \*PGM
  - g. PRJ8BINDER     \*BNDDIR
11. Do your housekeeping and email when your work is ready.
