

CIS270A Project 12

Part One:

1. Familiarize yourself with the content of WUSTDP.
2. Design an external printer file:
 - a. Heading:
 - i. "In-District Freshman Listing"
 - ii. Current Date
 - iii. Page Number
 - iv. Your Name
 - v. Appropriate column headings
 - b. Detail:
 - i. Student's SSN
 - ii. Last name
 - iii. First name
 - iv. Total earned credits, zero suppressed
 - v. GPA, edited, such as 3.52
3. Write an RPG application that utilizes embedded SQL to extract the in-district freshmen.
 - a. In-district is determined by a 'I' in DCODE
 - b. Freshmen have a total earned credits 30 or less
 - c. Print the records in alphabetical order by last name.

Part Two:

The administration of Wexler University has decided that the maximum enrollments per section (CAP) for all math classes must be increased by 15%. Math classes have a department (DEPT) of MTH.

1. Familiarize yourself with the content of WUSCTP. Note the current maximums for the MTH classes.
2. Make a copy of WUSCTP for your program's use, naming it MYSECTIONS.
3. Because this file will be updated via your SQL, journaling needs to be added to it. Journaling is a database technique whereby changes can be tracked. For simplicity sake, the class will all use the same journal which has already been created, although every physical file could have its own journal. This command must be issued via green screen:

```
STRJRNPF FILE(YOURLIB/MYSECTIONS) JRN(MCCRPG4/MCCJOURNAL)
```

Be sure that throughout your program, every reference to this file is MYSECTIONS, not the original file's name.
4. Design an external printer file that has an appropriate heading with current date and your name, and detail lines that contain the Section number, Department, Course Number, Maximum Enrollment, and Current Enrollment. Maximum enrollment and current enrollment should be zero-suppressed.
5. Write an RPG application that utilizes embedded SQL to update all the sections in the math department, increasing the maximum enrollment by 15% and then uses embedded SQL to print the sections from the math department, in ascending maximum enrollment sequence.
