

Assignment 2: Number Picking Assignment

9/13/26

Chris Grimm

Assignment Instructions

Download the Number_Picking_Example.zip file in this week's Blackboard module and complete these steps:

CIS 228 Live Demo Number Picking Game

<https://www.youtube.com/watch?v=w1PAkhGVBUU&feature=youtu.be>

- 1. Create a new folder for use with VS Code and copy the two files in the zip file.**
- 2. Execute the index.html file in the Integrated Browser.**
- 3. Open the README.md file and have a look (HINT: Right click on the file name and select Preview)**
- 4. TASK: Analyse the JavaScript code**
- 5. TASK: Create a plan to convert this game from numbers to letters (A-Z)**
- 6. Document your plan. There are several ways to do this so think through it**

I am going to copy the source and rename it to 'letters_game.html' then swap out anywhere it mentions a number to say letter instead. Then I will modify the javascript code to compare letters using the function 'toUpperCase()' to ensure input is always capitalized to compare with regardless of what the user enters ('A' == 'a'). I will use an array to do the randomization of the letter the user will guess.

- 7. Copy the index.html file to a new file called 'letters_game.html'**
- 8. Modify the JavaScript code to expect letters instead of numbers. HINT: you can use JavaScript to convert to upper case or lower case to keep the game a bit simpler.**
- 9. Implement the logic of your new code.**
- 10. Change the html to reflect the new game**

Drop two files here:

1. The new letters_game.html file
2. The plan file you have written.

Letter Guessing Game

I'm thinking of a letter between A and Z. Can you guess it?

Congratulations! You guessed the letter in 3 guesses!

Guesses: 3
