Project #10 Instructions
11/4/26
Chris Grimm

Assignment Instructions

Use the textbook's "World's Ugliest Video Player" (UglyPlayer.html) example as your starting point. Your goal is to customize the player while keeping it functional.

Create Your Project Page

Create a new page on the student server. Upload the video and any other supporting files to the correct locations, and make sure the file paths in your code match those locations.

Make These Changes

Your page must include the following:

- **Consistent header: Use the same header as your homework home page.**
- **Player customization: Make at least five distinct alterations to the video player. These could include changes to its colors, buttons, layout, size, or functionality.**
- **Navigation: Add a link from this page to your homework home page and a link from your homework home page back to this project.**

Test Your Work

Open your published page in a browser. Make sure the video loads, the player's controls work, and both navigation links lead to the correct pages.

Submit Your Project

Submit the following through this assignment in Blackboard:

1. **The URL to your completed project page on the student server.**
2. **A numbered list describing at least five alterations you made to the video player.**

Take time to experiment and make the player your own. If you run into a problem, please reach out. I am happy to help!
